

# SAR Test Services

Licensees are required to ensure their MFi accessories comply with the applicable requirements of the FCC and any other regulatory agencies. Specific Absorption Rate (SAR) testing simulates the RF absorption characteristics of different human tissues. Although SAR testing is **not** part of the MFi self-certification process, the third-party test lab below has the equipment needed to perform SAR testing for iPhone at this time. Please contact the lab directly for a quote and/or to schedule testing.
